# ABOUT US

---

At BIPP, we truly believe **we are in this together**. Our team of healthcare, infection prevention, information technology, and education experts have created this course to equip people with the knowledge required to limit the spread of infections in the workplace. Infection prevention knowledge is an essential part of creating safer work environments as it allows us to take the necessary safety measures and utilize protective equipment appropriately. With this in mind, we set out to create a course that is not only informative but applicable to the workplace.

## INSTRUCTORS

---

Course creation is led by Registered Nurse Bree Lanham and Healthcare IT Consultant Macey Price.

All content is regularly reviewed by a CBIC Certified Infection Preventionist.

## TESTIMONIALS

Our employees were scared about opening back up to the public. After taking this course I know this training will help our staff feel more prepared to do so. The content was informative and I was happy that it did not take all day to complete.

-Heather Walker

Chief Deputy of Cobb County Tax Commissioner

# TRAINING IS VITAL

- It is the first step to protecting employees and clients in the workplace.
- There is so much conflicting information out there regarding infection prevention, This training course ensures the entire team is on the same page and working off the same base of knowledge.
- Employers can make workspace modifications and supply PPE, but these tools are not going to be effective if people do not understand how to use them appropriately.

## COURSE

Currently, the best way to protect yourself against infections is to be knowledgeable about how diseases spread as well as best practices when it comes to prevention methods. That's why we designed this course to provide you with the knowledge and actionable steps you need to protect yourself and your co-workers by limiting the spread of infections in your workplace.

Our course provides employers and their employees:

- Understanding of the basic science of germs and infections
- Actionable steps to limit the spread of germs and ultimately the spread of infections in the workplace
- Specific education and preventative measures for relevant infections
- A sense of power and control over the spread of infections in the workplace
